

## The Challenge:

- Looking for a better way to schedule production in MFG/PRO®?
- Spending many hours navigating through different screens, reports, and inquiries to find information to create a valid production schedule?
- Looking for a simple way to do rough cut capacity planning without the overhead or data maintenance of a finite scheduler?
- Struggling with a third party interface or scheduling production via a spreadsheet?

## What's the right move?

**MPS Workbench**– A better way to schedule production in MFG/PRO®!

### ■ Why choose PICS MPS Workbench ?

The PICS MPS Workbench will allow your Master Schedulers to quickly create a valid production schedule and obtain answers concerning sales order or customer schedule demand, inventory, gross requirements, forecast quantities, MRP details, and action messages and more all from a single screen! The MPS Workbench will also allow you to utilize MFG/PRO®'s Resource Planning Module and will graphically display a capacity Plan as you create your production schedule.

### ■ Summary of Features:

- Web browser based graphical master production scheduling tool.
- Employs traditional master scheduling techniques.
- Consolidated view of production schedule and rough-cut capacity.
- Drill down functionality for sales order, customer schedule, inventory, planned order, MRP details, and MRP action message data.
- Average daily demand calculation and safety time allows you to establish target production and inventory quantity goals and manage those using visual alerts and messages.
- User defined sort functionality allows you to group items for a custom view. Group items by tool, color, profile, left hand and right hand parts, etc.
- Dynamic recalculate functionality allows you to perform true 'what if' analysis.
- Real time updates to MFG/PRO® with full error checking.
- Backward compatible from eB2.1 to virtually all MFG/PRO® releases and user interfaces
